

# BMI088

## Shuttle Board

### GENERAL DESCRIPTION

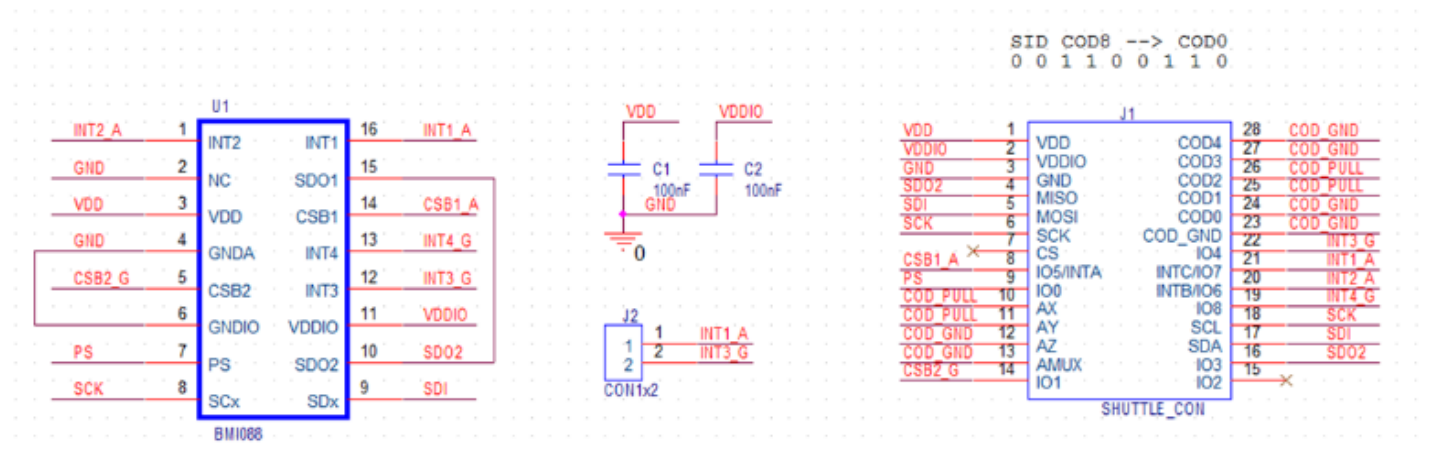

The Bosch Sensortec BMI088 shuttle board is a PCB with the BMI088 Inertial Measurement Unit (IMU) mounted on it. It allows easy access to the sensor's pins via a simple socket. As all Bosch Sensortec sensor shuttle boards have identical footprint, they can be plugged into Bosch Sensortec's advanced development tools (e.g. the Development Board or Application Board).

Note: Product photo may differ from real product's appearance.

## BMI088 shuttle board schematic

## NOTES

- ▶ The COD\_GND and COD\_PULL pins are pins connected to VDD or GND and are used to identify the shuttle board on the Application Board if used together with the DevelopmentDesktop2.0 evaluation software (SID = shuttle board ID).
- ▶ The naming of the signals differs slightly from the datasheet: for some signals, ‘\_A’ or ‘\_G’ was added to help the user to assign the signals to the accelerometer or gyro more easily.

## DELIVERABLES

- ▶ BMI088 shuttle board
